

Warm/Cool Sun/Moon

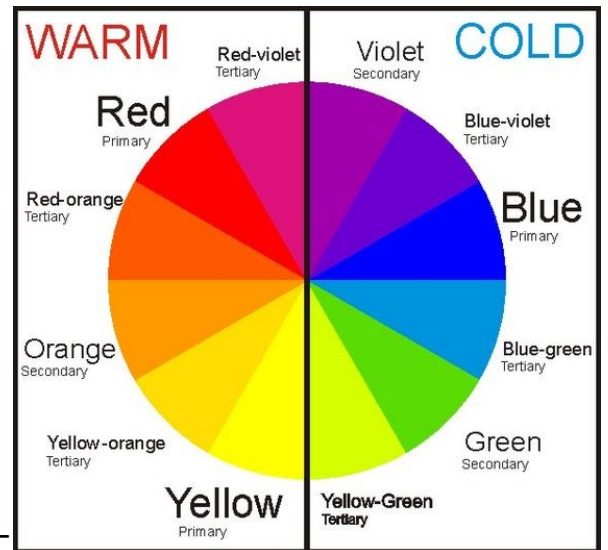

Review the idea of warm and cool colors.

On a 12"x12" square sheet of drawing paper, draw a large circle. Divide the circle in half with a profile, one side will represent the sun, the other side the moon.

Show extreme **contrast** between the two using **opposite** line designs (curving and zig-zag for example), opposite emotions, and opposite color temperatures.

Color the moon with cool colors and the sun with warm.

Don't forget the background!

Opposites create contrast!
