

Shading Forms Practice

In this worksheet, you have three different forms drawn with outlines only. Your job is to add values making the forms look more life-like and three dimensional. Use the photograph of the real objects to observe how light falls on the forms creating highlights and shadows. You can add shadows using 3 different pencil shading techniques:

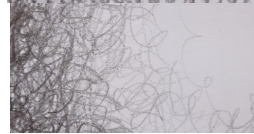

-Varying pressure on your pencil

-Crisscrossing lines

-or Scribbling lines

After shading the forms, add contrast and interest by using one colored marker to add designs and patterns in the background.
